

FIGURES, REFERENCE NUMERALS, AND ILLUSTRATIVE DIAGRAMS (OPTIONAL)

A. Overview

This section provides non-limiting examples of figures and reference numerals that may be included to further illustrate the disclosed system. Figures are optional for a provisional filing, and any figure described herein may be omitted, replaced, or simplified. The disclosure is not limited to any illustrated configuration.

B. Example Figure List (Non-Limiting)

FIG. 1 illustrates an example system overview comprising a plurality of sensing nodes and a computing system. FIG. 2 illustrates an example Node 1 external wearable ring form factor (partially open ring and/or fully enclosed ring). FIG. 3 illustrates an example Node 2 intravaginal longitudinal physiology monitor with distributed sensing zones. FIG. 4 illustrates an example Node 3 external geometry measurement device with scan path and sensor orientation. FIG. 5 illustrates an example Node 4 intraluminal geometry/compliance device with endpoint sensing and controlled radial stimulus. FIG. 6 illustrates an example Node 5 upper-body context device in chest-mounted, ring, and/or wrist-worn form factors. FIG. 7 illustrates an example data pipeline comprising acquisition, conditioning, artifact rejection, feature extraction, metric generation, and confidence scoring. FIG. 8 illustrates an example cross-device correlation workflow with time alignment and context-tagged segmentation. FIG. 9 illustrates an example cross-user correlation workflow under consent gating, using privacy-preserving derived metrics.

C. Example Reference Numerals (Non-Limiting)

100 system; 110 computing system (mobile device and/or server); 120 communications link (wired and/or wireless); 200 Node 1 external wearable physiology node; 300 Node 2 intravaginal longitudinal physiology node; 400 Node 3 external geometry measurement node; 500 Node 4 intraluminal geometry/compliance node; 600 Node 5 upper-body context node; 700 data pipeline modules; 710 acquisition and synchronization; 720 signal conditioning; 730 artifact rejection and wear validation; 740 feature extraction; 750 metric generation; 760 correlation computation; 770 confidence scoring and labeling; 800 privacy-preserving output interface.

D. Illustrative Diagram Notes

In various embodiments, figures may be simple block diagrams, line drawings, or abstract schematics. Figures need not depict explicit anatomical imagery. In certain embodiments, figures depict device silhouettes, sensor placements, block diagrams of processing modules, and example user interface layouts using abstract indices, zones, curves, and confidence indicators.

E. Variations

Any reference numeral scheme is illustrative only. Any figure described herein may be modified to reflect different form factors, sensor substitutions, processing distributions, and workflow sequences described in the specification.
